## Pressure

## Bourdon tube pressure gauge with switch contacts For the process industry, NS 63 Model PGS23.063

## 

## Applications

- Control and regulation of processes
- Monitoring of plants and switching of circuits
- For gaseous and liquid aggressive media that are not highly viscous or crystallising, also in aggressive environments
- Chemical industry, petrochemical industry, power plants, mining, on-/offshore, environmental technology, machine building and general plant construction

## Special features

- Up to 2 switch contacts per instrument
- Instruments with inductive contacts for use in hazardous areas
- Instruments with electronic contact for PLC applications
- Safety version S3 per EN 837

## Description

Wherever the process pressure has to be indicated locally and, at the same time, circuits need to be switched, the model PGS23.063 switchGAUGE finds its use.

Switch contacts (electrical alarm contacts) make or break circuits dependent upon the pointer position of the indicating measuring instruments. The instrument pointer (actual value pointer) moves freely across the entire scale range, independent of the setting. The set pointer can be adjusted using a removable adjustment key in the window.

Switch contacts consisting of several contacts can also be set to a single set point. Contact actuation is made when the actual value pointer travels beyond or below the desired set point.

Model PGS23.063 with switch contact model 830 E. 21

The pressure gauge is manufactured in accordance with DIN 16085 and fulfils all requirements of the relevant standards (EN 837-1) and regulations for the on-site display of the working pressure of pressure vessels.

As switch contacts, magnetic snap-action contacts, reed switches, inductive contacts and electronic contacts are available. Inductive contacts can be used in hazardous areas. For triggering programmable logic controllers (PLC), electronic contacts and reed switches can be used.

## Switch contacts

Magnetic snap-action contact model 821

- No control unit and no supply voltage required
- Direct switching up to $250 \mathrm{~V}, 1 \mathrm{~A}$

■ Up to 2 switch contacts per measuring instrument

## Inductive contact model 831

- Suitable for use in hazardous areas with corresponding control unit (model 904.xx)
- Long service life due to non-contact sensor
- Low influence on the indication accuracy
- Fail-safe switching at high switching frequency
- Insensitive to corrosion
- Also available in safety version
- Up to 2 switch contacts per measuring instrument

## Electronic contact model 830 E

- For direct triggering of a programmable logic controller (PLC)
- 2-wire system (option: 3-wire system)
- Long service life due to non-contact sensor
- Low influence on the indication accuracy

■ Fail-safe switching at high switching frequency

- Insensitive to corrosion

■ Up to 2 switch contacts per measuring instrument

## Reed switch model 851

■ No control unit and no supply voltage required

- Direct switching up to $250 \mathrm{~V}, 1 \mathrm{~A}$
- For direct triggering of a programmable logic controller (PLC)
- Free from wear as without contact
- Maximum of one switch contact (change-over contact) per measuring instrument (switching voltages $\mathrm{AC}<50 \mathrm{~V}$ and $\mathrm{DC}<75 \mathrm{~V}$, switch contact not adjustable from outside)

## Switching function

The switching function of the switch is indicated by index 1 , 2 or 3
Model 8xx.1: Normally open (clockwise pointer motion)
Model 8xx.2: Normally closed (clockwise pointer motion)
Models 821.3 and Change-over; one contact breaks and 851.3: one contact makes simultaneously when pointer reaches set point

For further information on switch contacts, see data sheet AC 08.01

## Other versions

- Contact model 821 with separate circuits
- Contact model 821 as change-over contact (break or make simultaneously at the set point)
- Contact model 821 with cable break monitoring (parallel resistance $47 \mathrm{k} \Omega$ and $100 \mathrm{k} \Omega$ )
■ Contact adjustment key fixed
- Connector (instead of cable)

## Specifications for instruments with magnetic snap-action contact model 821

| Measuring span | Max. number of contacts | Switching current range I |
| :--- | :--- | :--- |
| $\geq 4$ bar | 2 | $0.02 \ldots 0.3 \mathrm{~A}$ |

The recommended setting range of the contacts is $25 \ldots 75 \%$ of the scale ( $0 \ldots 100 \%$ on request). Contact material (standard): Silver-nickel, gold-plated

## Setting the contacts

The recommended minimum clearance between 2 contacts is $20 \%$ of the measuring span.
The switch hysteresis is $2 \ldots 5 \%$ (typical).

## Specifications for instruments with reed switch model 851

- The limit values presented here must not be exceeded.
- The setting range of the contacts is $10 \ldots 90 \%$ of the scale.
- The switching function can be set in manufacturing such that the reed contact will actuate exactly at the required switch point. For this, we need the switching direction to be specified on order.
